COMPANY PROFILE

FALCON GROUP
TECHNOLOGY CONSULTING

ABOUT US

Falcon Group is a wholly Iraqi-owned conglomerate. Since its inception in 2004, Falcon Group's portfolio has grown significantly. Welcoming the new environment of freedom in Iraq, Falcon Group has carefully selected domestic business sectors that capitalize on infrastructure growth. The Group now has 10 companies operating under its umbrella.

At Falcon Technology, we are a team of experienced consultants with a strong number of certified implementation experts, who are dedicated to making sure the you get the business functionality you need, as effective as you expect.

We are able to restructure your business by developing accounting information systems that fully compliant with the international standards. Moreover, we will recommend and guide you to the best software solutions which fits your needs and requirements.

Building capacity is one of our major activities which enables companies to empower their human resources using the highest professionalism standard.

OUR VISION

To support the successful growth of your business by the union of our power of knowledge with your resources, which will lead to absolute effectiveness and efficiency of your corporate operations.

Adding value is our core principle and we are committed to guide you how to manage your resources to be able to grow up and meet the economic rabid changes.

- Accounting Outsourcing
- IFRS Compliance

Business Advisory

- Building Capacity
- HR & Payroll Advisory
- Management Consultancy
- Workflow processing
- Documentation Process

WHAT is an AIS?

An accounting as an information system (AIS) is a system of collecting, storing and processing financial and accounting data that are used by decision makers.

Accounting information systems are designed to support all accounting functions and activities including auditing, financial accounting & reporting, -managerial/ management accounting and tax.

Building an accounting information system in compliance with international standards will grant the corporation many benefits including but not limited to internationally acceptance of financial statements; improves reliability of financial statements; comparability to other corporations internally and externally; improve the company ability to invest either by internal or external resources; enhancing the internal controls; and meet the international audit requirements.

WHAT is an ERP?

At its core, an ERP is an application that automates business processes, and provides insights and internal controls, drawing on a central database that collects inputs from departments including accounting, manufacturing, supply chain, sales, marketing and human resources (HR).

Once information is compiled in that central database, leaders gain cross-departmental visibility that empowers them to analyze various scenarios, discover process improvements and generate major efficiency gains. That translates to cost savings and better productivity as people spend less time digging for needed data.

ERP software that's tailored to meet the needs of an individual business pays major dividends, making these systems a critical tool for companies across industries and of all sizes. Many of the world's best-known and most successful firms have leaned on ERP for the last quarter century. Now, this software can be configured and priced to meet the needs of all-size businesses.

Put simply, an ERP system helps unify people, processes and technology across an organization.

WHY SAP?

SAP is the world's market leader. More than 425,000 customers in over 180 countries make use of SAP products in order to execute their business processes (e.g., sales, purchasing, production, banking, human resources, marketing, etc.).

SAP Business One

It is an Affordable, Easy-to-Use ERP Software Designed for small and mid-sized businesses. It enables you to manage your critical business functions across sales, distribution, financials, manufacturing and Customer Relationship Management (CRM) all in a single integrated system.
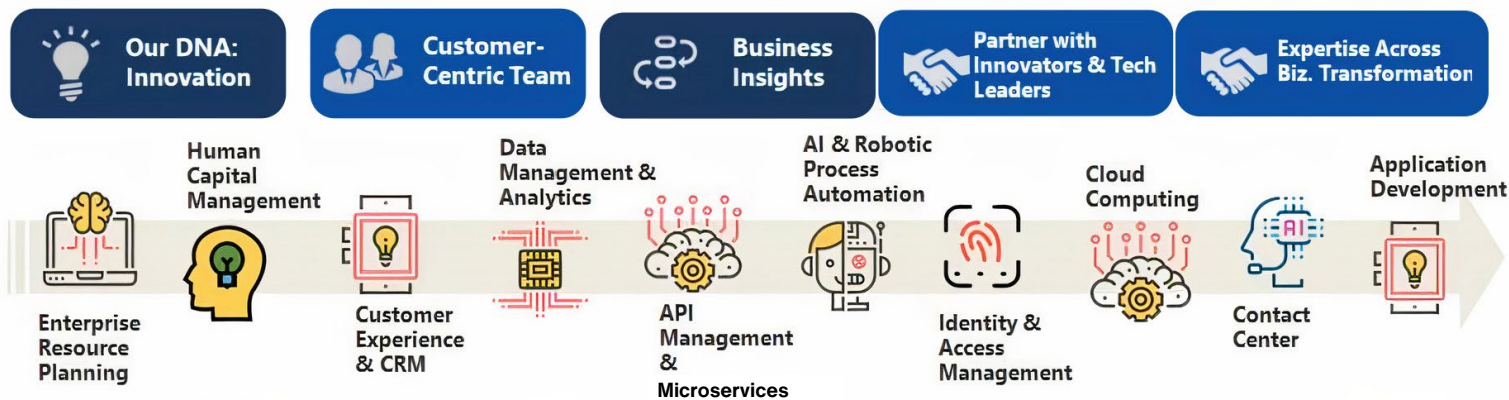

SAP Business ByDesign

It connects every function across your company, from finance, CRM, and HR to project management, supplier relationship management (SRM), and supply chain—on a single, unified cloud solution. This Cloud based ERP for mid-market companies and subsidiaries is the most complete business management solution fully integrated, offered on demand. It provides detailed and functional knowledge of a business management solution on a large scale, without the need of an expensive IT infrastructure.

SAP S/4 Hana

It is the latest ERP system from SAP's ERP software product line. The software is based on the innovative SAP Hana database technology and was launched as the fourth product generation in 2015. Users can choose between the SAP S/4HANA Cloud and On-Premise solution. It is mainly designed for large and growing enterprises. Its main feature is the flexibility to be customized as the business needs.
